

Care Drome

Introduction

From this project I am thinking of getting so many things in one hand. This is planned to be a mobile app that will be helpful to all of us during pandemic periods and also in our daily life. The main aim is to build a consultation network of doctors all over from our houses. There are so many values for this project, one thing is that we are providing a network between common people and doctors through internet so that they can utilize them whenever they needed.

Expected List of Features

- We are providing an option to call an ambulance through one button
- We are providing consultation through contact and video call by location access i.e. we can search the doctors near us who are available for any of their needs
- We are providing health tips in all areas of medicine
- We are providing entertainment things like meditation music's and all.

Market survey

- This is going to be a one-man army against so many apps that are already using like Samsung health, Google Fit, Sanjeevani Doctor App, M-fine, CallDoc, Doctor 24/7 etc.

- Apart from this we are providing a wide feature in one app.
